Oligo-dT track not found, Not I site shown in beginning of sequence is likely internal to the message. cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be mede available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Contact: Chin, H

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      process: NIH_BMAP_M_S3.2, NIH_BMAP_M_S2, NIH_BMAP_M_S1.
The subtracted library (NIH_BMAP_M_S3.2) was constructed as follows: PCRamplified cDNA inserts from NIH_BMAP_M_S2 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the NIH_BMAP_M_S2 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (LifeTechnologies) to generate the NIH_BMAP_M_S3.2 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)

Francesylation of YDJ1p is required for function at elevated growth
temperatures in Saccharomyces cerevisiae.";
J. Biol. Chem. 267:18890-18895(1992).
1- FUNCTION: PROBABLY INVOLVED IN MITOCHONDRIAL PROTEIN IMPORT. IS
ALSO REQUIRED FOR EFFICIENT TRANSICATION OF PRE-PRO-ALPHA-FACTOR.
1- SUBCELLULAR LOCATION: CONCENTRATED IN A PERINUCLEAR RING AS WELL
AS IN THE CYTOPLASM (ACCORDING TO REF.2).
1- INDUCTION: MASS IS A HEAT SHOCK GENE WHOSE EXPRESSION INCREASES
MODERATELY AT ELEVATED TEMPERATURES.
1- SIMILARITY: CONTAINS A DNAJ-LIKE DOMAIN AND THE FOUR CXXCCGXG
MOTHER FOUND IN DNAJ PROTEINS.
                                                                                                                                        SEQUENCE
